

How secure am I

This is an often asked question...

Regulators, Certification Bodies, Audit Firms and the Business itself often need to answer such questions, in order to gauge the effectiveness of our implemented security controls or to determine compliance to regulations.

SecureConekt traditionally provided its services to System Integrators, Vendors, and other ITSC organisations. We have decided to break from this tradition, and now proudly offer the same level of service directly to you as potential clients.

With extensive real world exposure to testing public, private and governmental institutions, our highly skilled security team bring a unique, and second to none level of expertise to you. Each test is meticulously planned, and individually tailored, based on requirements and purpose.

We offer the full range of assessment services:

- Internal Vulnerability Assessments
- External Vulnerability Assessments
- Penetration Testing
- Web Application Testing
- Code Review

With almost obsessive focus, our testers take each engagement personally, and strives to deliver the most comprehensive testing of your security controls.

We possess certifications ranging from CEH and OSCP to ISO 27001, as well as a host of certifications and experience in defensive technologies.

We furthermore understand that reporting is of the utmost importance to a business, and provide reports that addresses the needs of your resources, on management and technical levels.

Drop us an email with your contact details, our friendly social engineers are standing by to start the conversation

sales@secureconekt.co.za

We don't outsource any component of our testing, all our resources are in house!
